HOW TO USE THIS BOOK

Save the ideas. Keep the questions.

This overview connects the major cabinet zones in a home. Use it to set priorities, identify shared finish decisions and organise a room-by-room scope before discussing individual designs in greater detail.

Each design spread links to a relevant product range or selection guide. Keep the page number with your comments when you prepare the project brief.

From a visual direction to a useful brief.

A coordinated home, room by room.

01 / Describe the room

Share a measured plan, the intended activities and the items the space should contain.

02 / Select the details

Save preferred pages and identify the visible features, finishes and arrangements you want to discuss.

03 / Confirm the package

Review selected-item information, samples, quantities and the itemised supply scope before approval.

Foshan Bridge provides furniture, cabinetry and building-material sourcing and trade supply. The references in this book communicate design directions; selected products, materials, dimensions and included items are confirmed through the project specification.

Start with Cabinetry & Storage or discuss your project brief.

Begin with the kitchen.

Set the main working and gathering zones.

DESIGN DIRECTION

The kitchen brings storage, equipment and working surfaces into one composition. Establish the room layout and the role of any island before choosing the cabinet divisions. A whole-home brief should also identify which kitchen finishes will continue into nearby dining or living areas.

PLAN IT FOR YOUR ROOM

Provide a measured plan and appliance list. Separate cabinet supply, tops, appliances and connections in the room schedule. Record which visible details should be shared with other rooms.

Continue with Kitchen Cabinets to compare the related range and connect these choices with your project brief.

SAVE THE DIRECTION

Note the page and the particular details you prefer.

DEFINE THE ITEM

Use a selected reference, sample and written specification.

CHECK THE SCOPE

List quantities, fittings and supply responsibilities.

Compare priorities ↗ · Specification checklist ↗

Organise the dressing space.

Storage should follow the contents and the routine.

SAVE THE DIRECTION

Note the page and the particular details you prefer.

DEFINE THE ITEM

Use a selected reference, sample and written specification.

CHECK THE SCOPE

List quantities, fittings and supply responsibilities.

Compare priorities ↗ · Specification checklist ↗

DESIGN DIRECTION

A dressing room adds a different set of priorities to the home. Hanging, folded clothing, accessories and mirrors need specific places, while an island changes the route through the room. Coordinate the visible palette with the bedroom without assuming that the internal arrangement should be the same everywhere.

PLAN IT FOR YOUR ROOM

List the users and contents. Review door swings, drawers, seating and circulation on one plan. Identify interior fittings and lighting as separate included items.

Continue with Wardrobes & Closets to compare the related range and connect these choices with your project brief.

Coordinate the bathroom.

Bring the vanity, basin and mirror together.

SAVE THE DIRECTION

Note the page and the particular details you prefer.

DEFINE THE ITEM

Use a selected reference, sample and written specification.

CHECK THE SCOPE

List quantities, fittings and supply responsibilities.

Compare priorities ↗ · Specification checklist ↗

DESIGN DIRECTION

The furniture-like vanity offers a warm visual direction within the bathroom. Its finish can relate to other rooms, but the basin, plumbing and mounting arrangement make it a distinct specification task. Review the full elevation rather than selecting the cabinet without the mirror and surrounding surfaces.

PLAN IT FOR YOUR ROOM

Collect basin and tap information and mark service positions. Confirm mounting, top details, exposed surfaces and the items supplied by each party.

Continue with Bathroom Vanities to compare the related range and connect these choices with your project brief.

Give the living wall a role.

Equipment and display need a shared elevation.

DESIGN DIRECTION

A living-room storage wall can combine a screen, display areas and closed cupboards. Decide which activities the wall supports before filling every available space. The visible composition should relate to the room furniture and to the objects that will actually be stored or displayed.

PLAN IT FOR YOUR ROOM

List equipment and display objects. Show screen position, cable paths and access requirements. Confirm open and closed storage zones on the elevation.

Continue with Living Room Cabinets to compare the related range and connect these choices with your project brief.

SAVE THE DIRECTION

Note the page and the particular details you prefer.

DEFINE THE ITEM

Use a selected reference, sample and written specification.

CHECK THE SCOPE

List quantities, fittings and supply responsibilities.

Compare priorities ↗ · Specification checklist ↗

Connect dining and storage.

Plan the objects used around the table.

DESIGN DIRECTION

A dining cabinet can serve as a bridge between kitchen and living spaces. The timber-tone direction shown here combines a serving surface with storage and display. Define what belongs there so the cabinet supports dining routines rather than becoming an undefined extension of the kitchen.

PLAN IT FOR YOUR ROOM

Record crockery, glasses, serving items and any equipment. Review cabinet depth and door movement alongside the dining table and chairs.

Continue with Dining & Bar Cabinets to compare the related range and connect these choices with your project brief.

SAVE THE DIRECTION

Note the page and the particular details you prefer.

DEFINE THE ITEM

Use a selected reference, sample and written specification.

CHECK THE SCOPE

List quantities, fittings and supply responsibilities.

Compare priorities ↗ · Specification checklist ↗

Make room for focused work.

Define the working position and the storage around it.

DESIGN DIRECTION

A study can combine a large work surface and a full storage wall. The amount of furniture should follow the users and equipment, with book and file storage allocated deliberately. A coordinated home palette still allows the workspace to have its own practical arrangement.

PLAN IT FOR YOUR ROOM

Provide the equipment list and identify daily working positions. Include sockets, cable routes, chair movement and storage access in the room review.

Continue with Study & Home Office Cabinets to compare the related range and connect these choices with your project brief.

SAVE THE DIRECTION

Note the page and the particular details you prefer.

DEFINE THE ITEM

Use a selected reference, sample and written specification.

CHECK THE SCOPE

List quantities, fittings and supply responsibilities.

Treat utility as its own brief.

Equipment information leads the arrangement.

SAVE THE DIRECTION

Note the page and the particular details you prefer.

DEFINE THE ITEM

Use a selected reference, sample and written specification.

CHECK THE SCOPE

List quantities, fittings and supply responsibilities.

Compare priorities ↗ · Specification checklist ↗

DESIGN DIRECTION

The laundry room has a distinct relationship between machines, working surfaces and household storage. A stacked arrangement is one direction to compare, not a substitute for the selected equipment information. Keep utility requirements visible in the whole-home schedule even when the room is less prominent.

PLAN IT FOR YOUR ROOM

Confirm appliance models and installation information. Mark water, drainage, power and access. Separate equipment and service work from the cabinet package.

Continue with Balcony & Laundry Cabinets to compare the related range and connect these choices with your project brief.

Design the arrival routine.

Give everyday objects a defined landing place.

SAVE THE DIRECTION

Note the page and the particular details you prefer.

DEFINE THE ITEM

Use a selected reference, sample and written specification.

CHECK THE SCOPE

List quantities, fittings and supply responsibilities.

Compare priorities ↗ · Specification checklist ↗

DESIGN DIRECTION

The entrance combines hanging, seating and shoe storage in one wall. It is the point where the home layout meets daily movement, so the door swing and clear route matter alongside the cabinet elevation. Allocate the useful functions before selecting decorative divisions.

PLAN IT FOR YOUR ROOM

List the household items that arrive at the entrance. Check bench use, cupboard openings and circulation. Identify hooks, rails, mirrors and organisers individually.

Continue with Entryway Cabinets to compare the related range and connect these choices with your project brief.

Choose where finishes repeat.

Coordination does not require every room to be identical.

DESIGN DIRECTION

A mixed kitchen palette shows how different cabinet groups can have distinct roles while remaining connected. Use that principle across the home: select a small group of finish directions, then record where each belongs. Deliberate changes can help distinguish private, working and shared spaces.

PLAN IT FOR YOUR ROOM

Create a room-by-room finish schedule. Mark fronts, exposed ends, interiors and tops separately. Approve physical samples with adjacent surfaces and the actual lighting.

Continue with Kitchen Cabinets to compare the related range and connect these choices with your project brief.

SAVE THE DIRECTION

Note the page and the particular details you prefer.

DEFINE THE ITEM

Use a selected reference, sample and written specification.

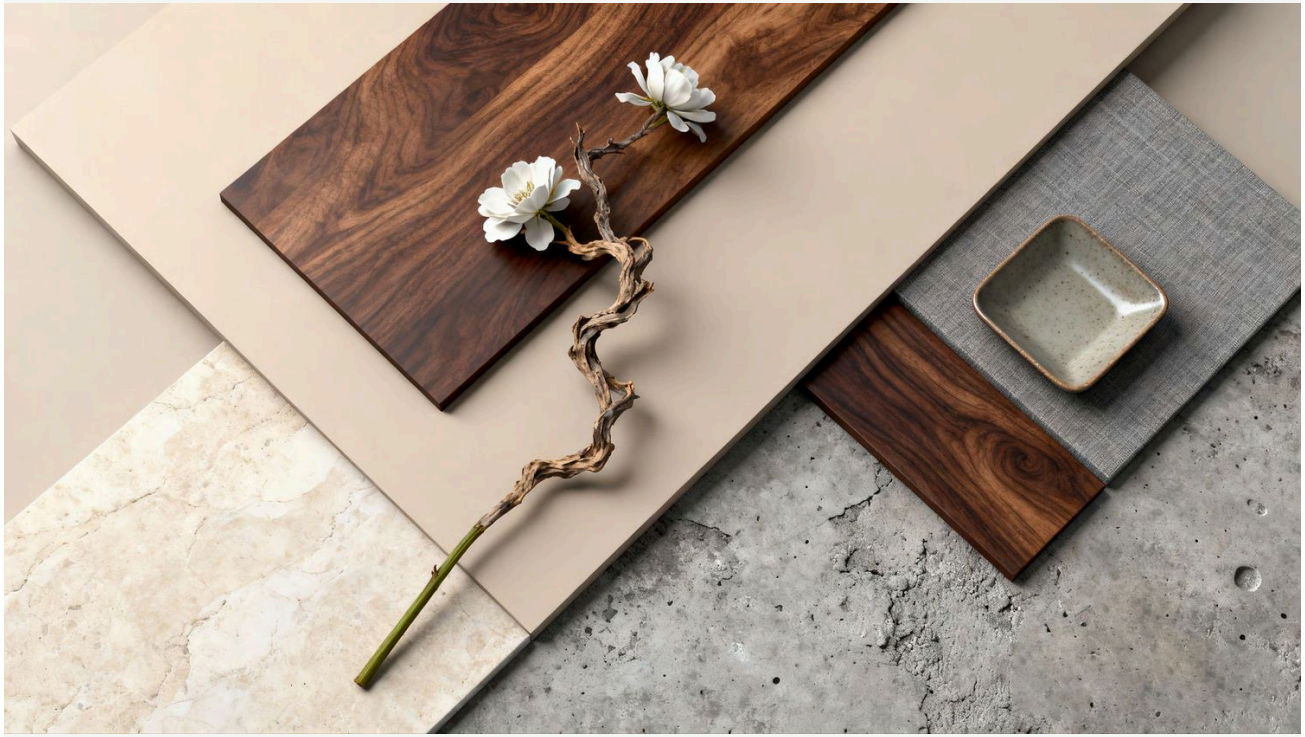

CHECK THE SCOPE

List quantities, fittings and supply responsibilities.

Create a sample record.

A shared reference keeps room decisions connected.

SAVE THE DIRECTION

Note the page and the particular details you prefer.

DEFINE THE ITEM

Use a selected reference, sample and written specification.

CHECK THE SCOPE

List quantities, fittings and supply responsibilities.

Compare priorities ↗ · Specification checklist ↗

DESIGN DIRECTION

A sample selection is more useful when it becomes a written record rather than a photograph alone. Colour, texture, edge treatment and sheen should be connected to a named part and room. This gives the different cabinet packages a common point of reference during review.

PLAN IT FOR YOUR ROOM

Label each approved sample and note its intended location. Record the approval date and drawing revision. Confirm any intentional variation before the item schedule is finalised.

Continue with Keep Materials and Specifications in One Clear Record to compare the related range and connect these choices with your project brief.

Allow rooms to share functions.

A dressing space may also contain a working surface.

SAVE THE DIRECTION

Note the page and the particular details you prefer.

DEFINE THE ITEM

Use a selected reference, sample and written specification.

CHECK THE SCOPE

List quantities, fittings and supply responsibilities.

Compare priorities ↗ · Specification checklist ↗

DESIGN DIRECTION

Some rooms combine storage, dressing and a desk-like position. That combination needs a more precise brief than a single room label. Identify the activities and the sequence of use, then decide which furniture belongs within the fitted cabinetry and which remains a separate item.

PLAN IT FOR YOUR ROOM

Mark each function on the plan. Check seating, mirrors, storage access and any equipment. Keep the combined arrangement visible in the same drawing revision.

Continue with Wardrobes with Dressing Tables to compare the related range and connect these choices with your project brief.

Close the room-by-room scope.

Separate fitted cabinets and loose furniture.

SAVE THE DIRECTION

Note the page and the particular details you prefer.

DEFINE THE ITEM

Use a selected reference, sample and written specification.

CHECK THE SCOPE

List quantities, fittings and supply responsibilities.

Compare priorities ↗ · Specification checklist ↗

DESIGN DIRECTION

A mixed work and seating area illustrates how cabinetry is only one part of a complete interior. The full room can appear coordinated while involving different suppliers, finishes and delivery arrangements. A whole-home schedule should explain those boundaries so that a visual reference is not mistaken for an all-inclusive package.

PLAN IT FOR YOUR ROOM

List fitted cabinets, desks, seating and accessories separately. Assign quantities and responsibility for each item. Use a consistent room and revision reference throughout the enquiry.

Continue with Cabinetry & Storage to compare the related range and connect these choices with your project brief.

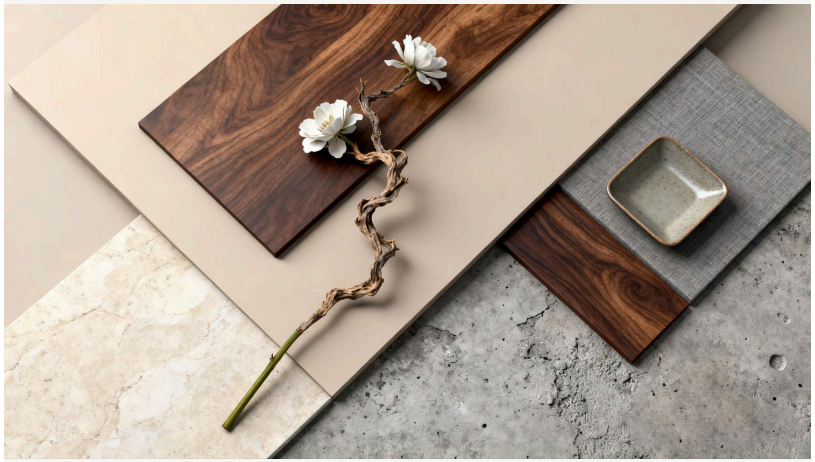

Compare the choices that matter.

Use this as a discussion sheet, then confirm the actual selected-item information.

DIRECTION	USE IT TO DISCUSS	CHECK TOGETHER
Begin with the kitchen	The kitchen brings storage, equipment and working surfaces into one composition.	Provide a measured plan and appliance list.
Give the living wall a role	A living-room storage wall can combine a screen, display areas and closed cupboards.	List equipment and display objects.
Design the arrival routine	The entrance combines hanging, seating and shoe storage in one wall.	List the household items that arrive at the entrance.
Close the room-by-room scope	A mixed work and seating area illustrates how cabinetry is only one part of a complete interior.	List fitted cabinets, desks, seating and accessories separately.

Keep the specification connected.

The image establishes a direction. The selected package needs a written record.

Review a representative sample and the actual selected-item information. Confirm values and claims from the relevant supplier documentation, then record the approval against the item and drawing revision.

Continue with the materials and specifications guide.

Room schedule

Each room, its priority, approximate scope and the project drawings available.

Shared palette

Finish samples, visible edge language, handles and intentional room variations.

Room-specific needs

Equipment, contents, internal fittings and service interfaces by room.

Scope & coordination

Who supplies each item, installation interfaces, quantities and drawing revisions.

Prepare a more useful enquiry.

Attach the plan and saved references. Mark the decisions that are ready and the questions still open.

Room & layout

- ☐ Measured plan / opening schedule attached
- ☐ Room use, equipment and access identified

Preferred direction

- ☐ Saved page numbers and comments attached
- ☐ Selected references and finish samples listed

Quantities & scope

- ☐ Item quantities and included components listed
- ☐ Supply and installation boundaries identified

Project coordination

- ☐ Destination and requested schedule provided
- ☐ Open questions and drawing revision recorded
