

FOSHAN BRIDGE

Kitchen Design Selection

Furniture, cabinetry & building materials
Sourcing and supply.

REVIEW EDITION 1.0 / NOVEMBER 2026

THE KITCHEN EDIT

A clearer kitchen brief.

Foshan Bridge coordinates furniture, cabinetry and building-materials sourcing and supply from Foshan and Guangdong for overseas projects. Use this selection to compare visual directions and prepare a kitchen brief. Confirm the final construction, dimensions, hardware and scope against your selected samples, drawings and quotation.

Design directions 03-09

Storage planning 10

Fronts & finishes 11

Your project brief 15

Images show design and product references. They do not identify completed Foshan Bridge projects.

01 / CONTEMPORARY

Clean lines.
A calm composition.

Flat-front cabinetry and a simple visual rhythm make the kitchen feel ordered. Begin with the relationship between tall units, the working run and the island.

LOOK FOR

Unbroken cabinet lines, restrained detailing and a clear work surface.

DISCUSS

Door construction, opening method, appliance integration and service access.

Design reference. Confirm the selected configuration before ordering.

02 / LIGHT & TIMBER

A little warmth. A lighter balance.

A timber-toned element can soften a light kitchen palette. Compare the visual balance of the fronts, shelving and island before choosing a surface sample.

LOOK FOR

How the timber tone relates to the floor, walls and adjacent furniture.

DISCUSS

Grain direction, colour variation, exposed ends and the approved finish sample.

A timber appearance does not establish a solid-wood construction.

03 / LIGHT PALETTES

Bright by design.

A light palette offers a clear starting point for a kitchen scheme. Review the fronts alongside the countertop and backsplash rather than selecting each colour in isolation.

LOOK FOR

Contrast between cabinet faces, worktops and handles.

DISCUSS

Actual colour samples, surface sheen, edge details and cleaning guidance.

Screen colours and lighting may differ from the final material.

04 / THE ISLAND

A place to gather.

An island can bring preparation, storage and informal seating into one composition. Start with the room plan and the way people move through the space.

LOOK FOR

The relationship between seating, the working side and circulation.

DISCUSS

Room dimensions, seating clearance, power, plumbing and appliance requirements.

The illustrated arrangement is not a dimensional or installation recommendation.

05 / FRAMED DETAIL

Character in the detail.

Framed fronts introduce a more defined pattern to the kitchen. Compare the profile, handle position and proportions of the doors and drawers together.

LOOK FOR

A consistent relationship between framed doors, drawer fronts and open display.

DISCUSS

Profile sample, paint or veneer specification, hardware and the treatment of end panels.

Door appearance alone does not confirm its core material or construction.

06 / DARK PALETTES

Depth. Contrast. Character.

Dark cabinetry can provide a strong visual anchor. Balance the cabinet tone with the worktop, room lighting and adjacent finishes.

LOOK FOR

Where light enters the room and how the island reads against the tall units.

DISCUSS

Physical samples, surface texture, lighting coordination and visible edge details.

Palette reference; no surface-performance claim is implied.

07 / COMPACT PLANNING

Small space. Clear priorities.

In a tighter room, prioritise the appliances and routines that matter most. A U-shaped or single-wall arrangement should be developed from measured dimensions.

LOOK FOR

Work zones, corner access, preparation space and the route into the kitchen.

DISCUSS

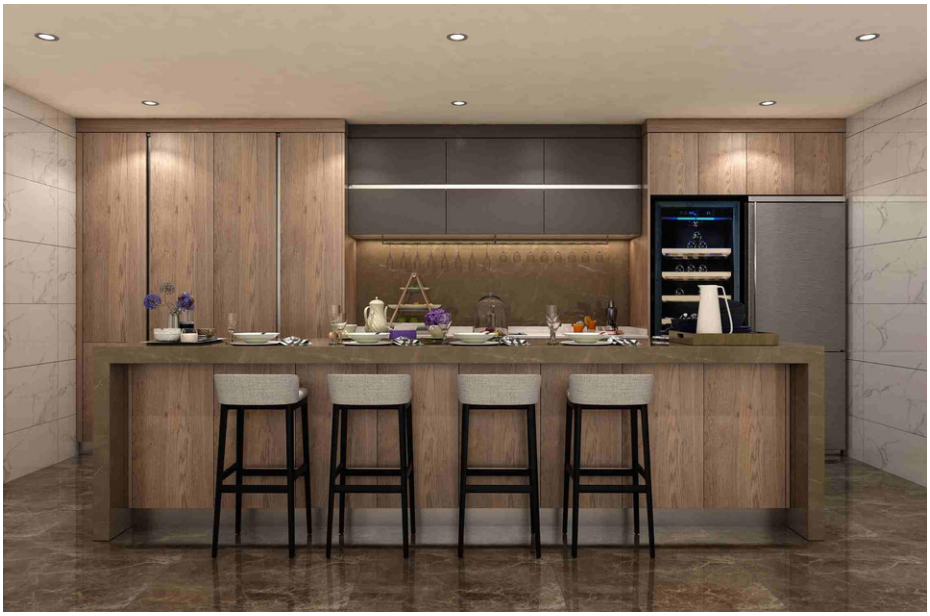
Door and drawer clearance, appliance ventilation, utilities and installation access.

A compact-looking scene does not prove that a layout fits your dimensions.

BEHIND THE FRONTS

Plan for what you use every day.

Start with the items you need to store, not a list of accessories. A useful storage brief explains what belongs close to cooking, washing and preparation.



Front and opening detail

01 **Everyday access**

Drawers and accessible shelves for frequently used utensils and cookware.

02 **Tall storage**

A place for pantry items, small appliances and less-used equipment.

03 **Corners & services**

Check access, plumbing and clearance before selecting corner or sink-base fittings.

Internal fittings and opening systems depend on the cabinet dimensions and selected hardware.

SAMPLE BEFORE YOU CONFIRM

From a visual idea to a physical sample.

Use these surface and front references to explain a direction. Approve a physical sample and the actual material schedule before confirming production.

SURFACE APPEARANCE

Light texture

Deep woodgrain

Warm woodgrain

Textured grey

Pale woodgrain

Dark woodgrain

FRONT PROFILES

Linear frame

Curved profile

Pale frame

Deep frame

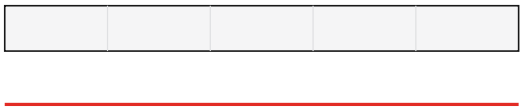
Illustrative appearance references, not a stock list, certified material specification or promise of exact colour.

A PLAN BEFORE A PRODUCT

Start with the room. Then choose the layout.

These simple studies show different relationships between cabinet runs. They are conversation starters, not construction drawings.

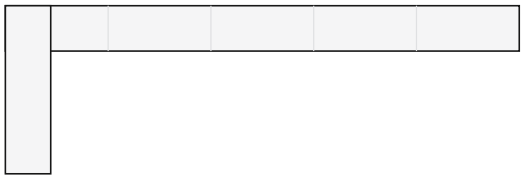
01



Single wall

A linear arrangement for a defined wall or open room edge.

02



L-shaped

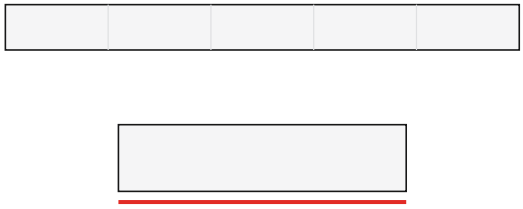
Two connected runs; consider the corner and the remaining circulation.

03

U-shaped

Three working sides; check the usable central area and access.

04



Island

A separate central unit; confirm circulation and the required services.

No dimensions, regulatory compliance or installation suitability are established by these diagrams.

FROM IDEA TO AGREEMENT

Turn the reference into a specification.

A visual selection becomes actionable when each component is recorded. Use the following fields to align samples, drawings and the quotation.

COMPONENT	RECORD AND CONFIRM
Cabinet bodies	Core material, thickness, exposed panels and internal finish.
Door fronts	Profile, finish, colour sample and grain direction.
Countertops	Material selection, thickness, edge, cut-outs and joints.
Hardware	Opening system, hinges, runners and accessory models.
Appliances & services	Confirmed dimensions, power, plumbing and ventilation.
Site & delivery	Room measurements, access, destination and installation responsibilities.

Technical values and commercial terms remain project-specific.

KEEP THE DECISIONS CONNECTED

A connected sourcing process.

From the first brief to shipment coordination, keep the selected scope and written approvals connected.

1

Share your brief

Provide drawings, reference pages, quantities and the destination.

2

Review the options

Compare relevant products, materials and preliminary scope.

3

Confirm the details

Align samples, drawings, quotation and agreed responsibilities.

4

Follow the order

Keep supplier updates and changes against the approved record.

5

Coordinate checks

Agree the checks and records appropriate to the order.

6

Prepare the shipment

Confirm packing, consolidation and freight arrangements as applicable.

Scope, charges, timing and responsibilities follow the agreed quotation and order documents.

BRING YOUR SELECTION

Your project.
A practical starting point.

Prepare the details below before discussing your selection. A clear brief makes it easier to identify the remaining questions.

- [ ] Floor plan and measured room dimensions
- [ ] Project country, city and site access
- [ ] Preferred reference pages and design details
- [ ] Approximate unit count or product schedule
- [ ] Appliance list and service requirements
- [ ] Target timing, budget range and support needed
